Computer Methods in Applied Mechanics and Engineering 97 (1992) 439–443
North-Holland

Subject index of Volume 97*

Boundary element methods

A cost comparison of boundary element and finite element methods for problems of time-harmonic acoustics, I. Harari and T.J.R. Hughes (1) 77–102
Analysis of continuous formulations underlying the computation of time-harmonic acoustics in exterior domains, I. Harari and T.J.R. Hughes (1) 103–124
An improved numerical integration technique for boundary integral evaluation in anisotropic plate problems, Z. Heng and D. McCammond (3) 317–320

Calculus of variations

Using a reduced number of Lagrange multipliers for assembling parallel incomplete field finite element approximations, C. Farhat and M. Geradin (3) 333–354

Dynamics

On the finite element dynamic analysis of flexible mechanisms, Y.A. Khulief (1) 23– 32
Numerical study of an intrinsic component mode synthesis method, F. Bourquin and F. d'Hennezel (1) 49– 76

Elasticity

The *p*-version of the finite element method for the elliptic boundary value problems with interfaces, H.-S. Oh and I. Babuška (2) 211–231
Calculation of the opening displacement of surface-breaking plane cracks, J.N. Dewynne, D.A. Hills and D. Nowell (3) 321–331

Finite difference method

Parametric instability of rectangular plates by the energy based finite difference method, J.P. Singh and S.S. Dey (1) 1– 21
The *p*-version of the finite element method for the elliptic boundary value problems with interfaces, H.-S. Oh and I. Babuška (2) 211–231

Finite element and matrix methods

On the finite element dynamic analysis of flexible mechanisms, Y.A. Khulief (1) 23– 32

* The issue number is given in front of the page numbers.

A cost comparison of boundary element and finite element methods for problems of time-harmonic acoustics, I. Harari and T.J.R. Hughes (1) 77–102
Mixed finite element methods for the circular arch problem, B.D. Reddy and M.B. Volpi (1) 125–145
What are C and h?: Inequalities for the analysis and design of finite element methods, I. Harari and T.J.R. Hughes (2) 157–192
Circumventing the Babuška–Brezzi condition in mixed finite element approximations of elliptic variational inequalities, H.J.C. Barbosa and T.J.R. Hughes (2) 193–210
On the L_2 error for the p-version of the finite element method over polygonal domains, S. Jensen and M. Suri (2) 233–243
Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288
Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316
Using a reduced number of Lagrange multipliers for assembling parallel incomplete field finite element approximations, C. Farhat and M. Geradin (3) 333–354
A field-consistent and variationally correct representation of transverse shear strains in the nine-noded plate element, B.P. Naganarayana, G. Prathap, B. Dattaguru and T.S. Ramamurty (3) 355–374
A finite element model of crack growth in a finite body in the context of mode I linear viscoelastic fracture, M.K. Warby, J.R. Walton and J.R. Whiteman (3) 375–397
Recent experiences with error estimation and adaptivity, Part I: Review of error estimators for scalar elliptic problems, T. Strouboulis and K.A. Haque (3) 399–436

Fluid mechanics

Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288

Fracture mechanics

A finite element model of crack growth in a finite body in the context of mode I linear viscoelastic fracture, M.K. Warby, J.R. Walton and J.R. Whiteman (3) 375–397

Gas dynamics

Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288

General Rayleigh–Ritz and Galerkin techniques

Numerical study of an intrinsic component mode synthesis method, F. Bourquin and F. d'Hennezel (1) 49– 76
An improved numerical integration technique for boundary integral evaluation in anisotropic plate problems, Z. Heng and D. McCammond (3) 317–320

Heat and diffusion

Improved numerical dissipation for time integration algorithms in conduction heat transfer, R.E. Cornwell and D.S. Malkus (2) 149–156

Incompressible and near incompressible media

Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316

Miscellaneous topics

Recent experiences with error estimation and adaptivity, Part I: Review of error estimators for scalar elliptic problems, T. Strouboulis and K.A. Haque (3) 399–436

Nonlinear mechanics

Circumventing the Babuška–Brezzi condition in mixed finite element approximations of elliptic variational inequalities, H.J.C. Barbosa and T.J.R. Hughes (2) 193–210

Numerical solution procedures

Parametric instability of rectangular plates by the energy based finite difference method, J.P. Singh and S.S. Dey (1) 1– 21
Improved numerical dissipation for time integration algorithms in conduction heat transfer, R.E. Cornwell and D.S. Malkus (2) 149–156
What are C and h?: Inequalities for the analysis and design of finite element methods, I. Harari and T.J.R. Hughes (2) 157–192
The p-version of the finite element method for the elliptic boundary value problems with interfaces, H.-S. Oh and I. Babuška (2) 211–231
On the L_2 error for the p-version of the finite element method over polygonal domains, S. Jensen and M. Suri (2) 233–243
Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288
Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316
An improved numerical integration technique for boundary integral evaluation in anisotropic plate problems, Z. Heng and D. McCammond (3) 317–320

Using a reduced number of Lagrange multipliers for assembling parallel incomplete field finite element approximations, C. Farhat and M. Geradin (3) 333–354
A finite element model of crack growth in a finite body in the context of mode I linear viscoelastic fracture, M.K. Warby, J.R. Walton and J.R. Whiteman (3) 375–397
Recent experiences with error estimation and adaptivity, Part I: Review of error estimators for scalar elliptic problems, T. Strouboulis and K.A. Haque (3) 399–436

Optimization and design of structures

A computational procedure for part design, G. Anagnostou, E.M. Rønquist and A.T. Patera (1) 33– 48

Problems in physics

A cost comparison of boundary element and finite element methods for problems of time-harmonic acoustics, I. Harari and T.J.R. Hughes (1) 77–102
Analysis of continuous formulations underlying the computation of time-harmonic acoustics in exterior domains, I. Harari and T.J.R. Hughes (1) 103–124

Shells and plates

Parametric instability of rectangular plates by the energy based finite difference method, J.P. Singh and S.S. Dey (1) 1– 21
A field-consistent and variationally correct representation of transverse shear strains in the nine-noded plate element, B.P. Naganarayana, G. Prathap, B. Dattaguru and T.S. Ramamurty (3) 355–374

Singularity method

Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316

Solution of differential equations

Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316

Solution of integral equations (singularity method)

Calculation of the opening displacement of surface-breaking plane cracks, J.N. Dewynne, D.A. Hills and D. Nowell (3) 321–331

Solutions of ordinary and partial differential equations

Analysis of continuous formulations underlying the computation of time-harmonic acoustics in exterior domains, I. Harari and T.J.R. Hughes (1) 103–124

Penalty-combined method and applications in solving elliptic problems with singularities, Z.C. Li and T.D. Bui (3) 291–316

Stability in structural mechanics

Parametric instability of rectangular plates by the energy based finite difference method, J.P. Singh and S.S. Dey (1) 1– 21

Structural mechanics

Parametric instability of rectangular plates by the energy based finite difference method, J.P. Singh and S.S. Dey (1) 1– 21
Mixed finite element methods for the circular arch problem, B.D. Reddy and M.B. Volpi (1) 125--145
A field-consistent and variationally correct representation of transverse shear strains in the nine-noded plate element, B.P. Naganarayana, G. Prathap, B. Dattaguru and T.S. Ramamurty (3) 355–374

Subsonic flow

Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288

Supersonic flow

Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288

Transonic flow

Adaptive implicit/explicit finite element methods for axisymmetric viscous turbulent flows with moving boundaries, W.W. Tworzydlo, C.Y. Huang and J.T. Oden (2) 245–288

Viscoelastic and viscoplastic media

A finite element model of crack growth in a finite body in the context of mode I linear viscoelastic fracture, M.K. Warby, J.R. Walton and J.R. Whiteman (3) 375–397
